

## pH measuring system for hygienic applications

- Special glass-free probe for measuring pH to be connected to Type 8619 multiCELL
- Sterile design, CIP-compatible, in-line sterilizable
- Robust and unbreakable construction
- Long service life, long calibration intervals
- Especially suitable when preparing foods and drinks

The Type 8201 pH measuring system is suitable for measuring absolute pH values in liquids between pH 0 and pH 12 at medium temperatures of up to 140°C and process pressures of max. 6 bar. Due to its hygienic design and the robust glass-free layout, this type is particularly suitable for use in hygienic processes. An example would be the production of foods and active ingredients, during which the pH value of liquid mediums - including those which are viscous or contain solids - is measured. The pH probe's extremely smooth enamel surface inhibits the medium from sticking and is very easy to clean in line. Due to its robust design and high temperature and chemical tolerance, the probe stays in the process even during a CIP purification. This means that expensive retractable fittings can be dispensed with.

### Technical data - Probe

<b>Measuring value</b>	Absolute pH
<b>Reference system</b>	Machined diaphragm (ceramic enamelled), reference electrode Ag/AgCl, KCl electrolyte 3-molar sterile
<b>Measuring range</b>	0...10 pH (for up to 12 pH see diagram)
<b>Measuring error</b>	Depending on calibration max. 0.1 pH
<b>Repeatability</b>	0.05 pH
<b>Measuring chain zero point</b>	8.65 ±1 pH*
<b>Measuring chain isotherm point</b>	1.0 ±1 pH; Uis= 440 mV*
<b>Slope</b>	56...59 mV/pH* at 25°C (77°F)
<b>Ambient temperature</b>	0...+50°C (+32...+122°F)
<b>Medium temperature</b>	0...+140°C (+32...+284°F)
<b>Minimal conductivity</b>	1 µS
<b>Thermoshock resistance</b>	ΔT = 120°C (248°F)
<b>Medium pressure</b>	-1...+6 bar rel. (-14...+87 PS)
<b>Temperature compensation</b>	Pt1000
<b>Materials</b>	Probe head PVDF Enamelled steel pipe, ceramic enamelled ground dia-phragm, 1.4404 process connection and EPDM seal
<b>Signal outputs</b>	Pt1000 2-wire, pH value in mV
<b>Electrical connection</b>	6 pin gold-plated
<b>Protection type</b>	IP68
<b>Certificates</b>	EHEDG (Type EL - CLASS I); FDA declaration of conformity; ECR1935/2004 declaration
<b>Adaptation set</b>	For pH armatures Type 8200 or Type 8201 For flange connection adapted for GEA Tuchenhausen VARIN-LINE process connection (DN50...DN125; EHEDG) or for Clamp 2"
<b>Suitable transmitters</b>	Type 8619 multiCELL transmitter/controller; devices with isotherm option

**Hygienic connection fittings Type 8201**

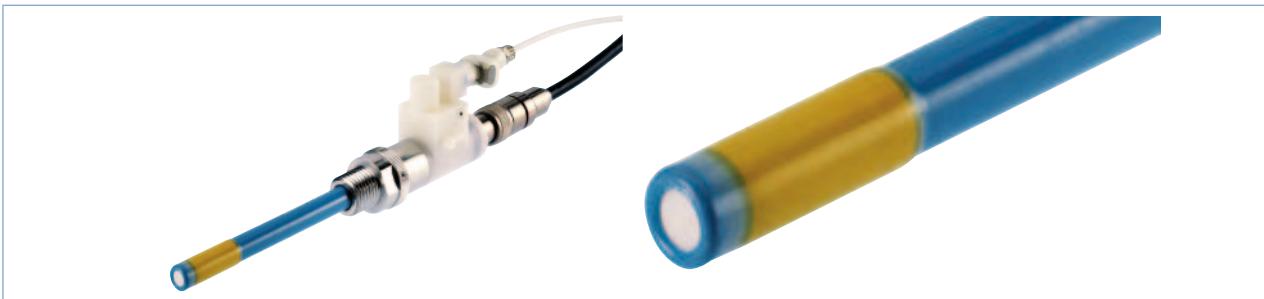

Weld connection DN25 (Ingold welding nozzle),  
Weld connection DN30 (EHEDG), other on request  
Stainless steel connecting pieces 1.4404

**pH armature Type 8200**

Only stainless steel versions possible.  
For dimensions see data sheet Type 8200

\* For exact values see probe test report

## Measuring principle

The pH sensor works as a single-rod measuring cell. The measuring electrode and reference electrode are combined in one element. An enamelled steel pipe is used as the basic carrier. The measuring electrode is created by additionally attaching an ion-sensitive enamel layer (yellow) with metallic voltage conductor (positioned in the non-conductive blue enamel carrier layer). An ion exchange of H<sup>+</sup>-ions and alkali ions takes place on the surface (gel layer) of this enamel layer. The Ag/AgCl reference electrode is located in the interior of the enamel pipe filled with electrolyte. A ceramic machined diaphragm is pressed into the lower end of the pipe. Voltage transfer takes place when the electrolyte makes contact with the measuring solution via the annular gap of the diaphragm. A Pt1000 for temperature compensation is also integrated in the sensor. The electrolyte used is 3-molar KCl, stored in a separate electrolyte vessel and permanently connected to the probe via a hose.

The pressure of the electrolyte vessel is maintained slightly above process pressure by means of an attached pressure controller. For non-pressurised processes the static overpressure of the pressure vessel mounted approx. 0.5 m above the probe is generally sufficient. Due to the very slight permanent electrolyte flow that flows through the extremely small annular gap, contamination of the reference electrode is practically eliminated. Accidental operation without electrolyte is prevented by optional inductive level monitoring of the pressure container. When a minimum level has been reached, the electrolyte supply bottle in the pressure container is simply changed.

Bürkert Transmitter/Controller Type 8619 provides the analysis of the measured value. The maximum length of cable (**5 m**) between probe and converter (transmitter) has to be respected. pH probe Type 8201 is supplied without adaptation. The appropriate set is selected according to the fitting/armature chosen. Different hygienic variations of Type 8201 are available. Various standard armatures Type 8200 can be used as well.

## Structure

The complete measuring system consists of the pH probe, an adaptation set, an attachment fitting, the reservoir with hose for the electrolyte solution, the electrolyte solution and the electric cable for connecting to a suitable transmitter.

The pH probe Type 8201 is supplied without adaptation. According to the chosen fitting/armature the appropriate adaptation set has to be selected. Different hygienic fittings (Type 8201) or for general purpose applications pH armatures of Type 8200 can be selected.

## Installation

Intended performance is limited to proper installation of the fitting (by weld), integrating the probe into the process using the appropriate adaptation kit, proper mounting of the electrolyte vessel – electrolyte attachment perpendicularly downwards – close to the measuring point and connecting the pH sensor and electrolyte vessel using the hose connection supplied. The electrolyte supply bottle is inserted into the electrolyte vessel and the pH sensor filled with electrolyte by opening the ventilation screw.

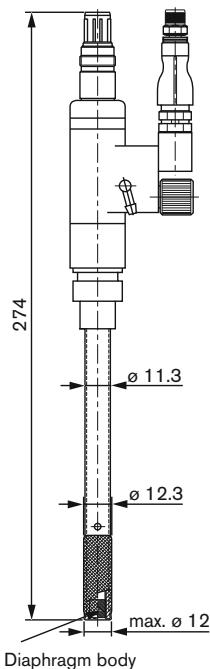

You are free to choose the assembly position of the pH sensor. During operation care must be taken that the active surface (length approx. 45 mm from probes lower edge) is completely surrounded by medium. The flow velocity should not exceed 3...4 m/s. Dry-storage of the pH sensor is unrestricted.

The probe is connected to the transmitter by means of the attachment cable. Inductive level switch is attached to a suitable analyzing device.

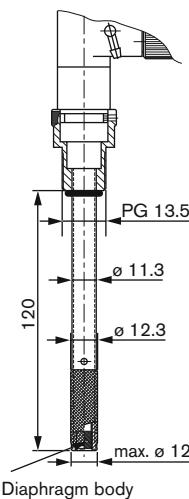

## Dimensions [mm]

**pH probe enamel**

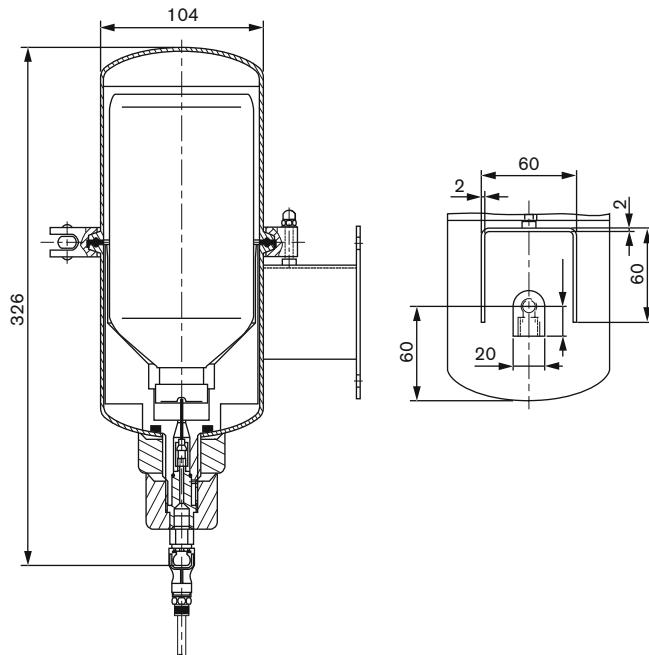

without adaptation

**pH probe**

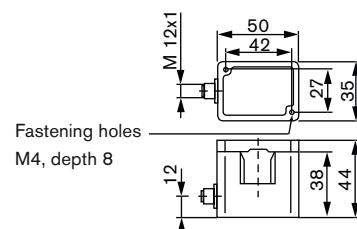

with adaptation set PG13.5 for pH armature Type 8200

**Electrolyte vessel**

with built-in electrolyte supply bottle

**Ultrasonic level switch**

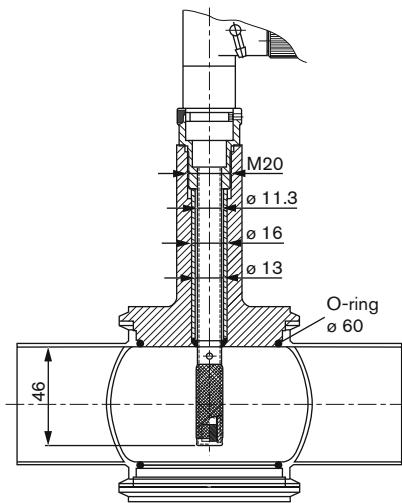

with M12 connector

## Dimensions [mm] (continued)

**pH probe**

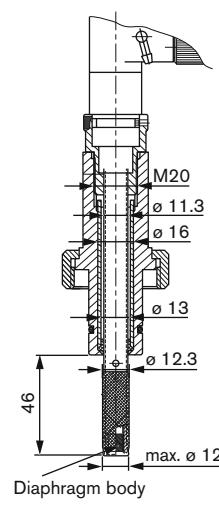

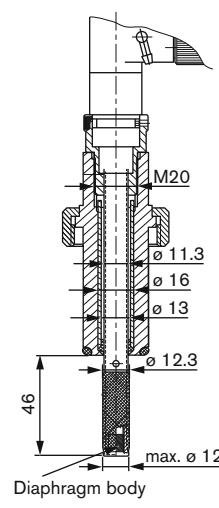

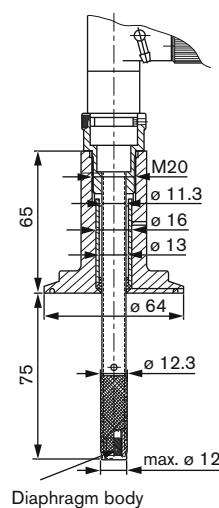

with adaptation set for flange connection adapted for  
GEA Tuchenhausen VARINLINE process connection  
(DN50..DN125; EHEDG)

with adaptation set  
Clamp 2" external ø 64 mm

with adaptation set  
DN30 (EHEDG)

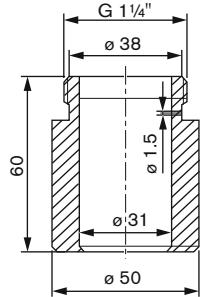

with adaptation set  
DN25

**Note:**

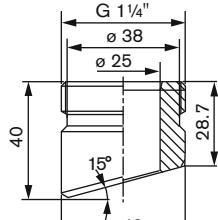

Housing and O-ring ø 60 not included in delivery

**Fittings Type 8201**

EHEDG

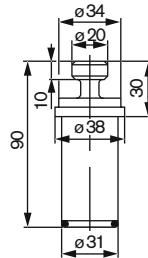

Welding tab DN25  
sloped

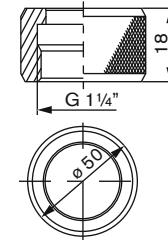

Welding tab DN25  
straight

Blind plug for welding  
tab DN30 EHEDG

Nut for blind plug  
(welding tab DN30 EHEDG)

## Ordering information and chart

### A complete Type 8201 pH measuring system contains the following components:

- pH probe enamel
- Suitable adaptation set for fitting/armature
- Fitting/armature
- Electrolyte vessel (electrolyte hose included)
- Supply bottle with 1 litre electrolyte KCl
- Connection cable for transmitter
- Transmitter / Controller Type 8619 (see data sheet Type 8619)

**Note:** The cable between probe and transmitter must categorically be selected as short as possible – particularly at low process temperatures – in order to guarantee measurement signal dynamics that are as high as possible. A cable length of 10 m should only be used in exceptional cases.

If required, to disinfect and rinse the system you will need:

- Demineralized water
- Plastic bottle with septum for alcohol filling

### All necessary parts have to be ordered separately

Description	pH measuring range	Medium temp.	Pressure (rel.)	Electrical connection	Item no.
<b>Probe</b>					
pH probe-enamel without adaptation	0...10 (12)	0...+140°C	-1...6 bar	6 pin gold-plated	554 849
<b>Adaptation sets</b>					
Adaptation set for welding tab DN25 Type 8201		Union nut G 1 1/4" / DN25			554 866
Adaptation set for welding tab DN30 (EHEDG) Type 8201		Union nut G 1 1/4" / DN30			554 873
Adaptation set PG13.5 for pH armature Type 8200		PG13.5 with O-ring			554 862
Adaptation set for flange connection adapted for GEA Tuchenha-gen VARINLINE process connection (DN50...DN125; EHEDG)		Flange adapted for GEA Tuchenha-gen VARINLINE process connection			558 617
Adaptation set Clamp 2" external ø 64 mm		Clamp 2"			559 744
<b>Electrolyte vessel</b>					
Electrolyte vessel, stainless steel		incl. electrolyte hose set 5 m,			554 850
Electrolyte vessel, stainless steel, with level switch		compressed air attachment, pipe / wall-mounting unit 1			554 851
<b>Operating liquids</b>					
Electrolyte KCl, sterilised, 1 litre plastic bottle (conform to FDA)		Electrolyte reference system			554 852
Plastic bottle with septum		For self-filling with alcohol 70% vol.			554 854
<b>Connection cables</b>					
Connection cable for pH probe enamel, 3 m long		6 pole Variopin coupling on pH probe, flexes on transmitter			554 855
Connection cable for pH probe enamel, 5 m long					554 856
Connection cable for pH probe enamel, 10 m long*					554 857
<b>Fittings Type 8201 attachment cables</b>					
Welding tab DN25, 40 mm, straight, 1.4404		DN25/weld attachment straight			554 858
Welding tab DN25, 40 mm, sloped, 1.4404		DN25/weld attachment diagonal			554 859
Welding tab EHEDG, DN30, 60 mm, straight, 1.4404		DN30/weld attachment straight			554 860
Blind plug for welding tab EHEDG, DN30, 1.4404**		Union nut G 1 1/4" / DN30			554 861
Nut for blind plug for welding tab EHEDG, DN30, 1.4404**		G 1 1/4" / DN30			554 872

\* Only to be used in exceptional cases, please consult your Bürkert application specialist for application advice.

\*\* Absolutely necessary in order to prevent warping when welding EHEDG DN30 connecting pieces.

## Ordering chart, inspection and retrofit sets

The maintenance sets contain small parts such as O-rings, seals, stainless steel canulas, flexible tubing, couplings etc.  
The retrofit sets contain all parts needed for mounting / dismantling a level switch.

Description	Contents	Item no.
<b>Maintenance sets</b>		
Inspection set for pH probe enamel	2 O-rings 10 x 2.5 mm EPDM, 2 O-rings 20 x 2.5 mm silicon, 2 O-rings 23.39 x 3.53 mm EPDM, 4 items adaptor reinforcement ring PTFE	554 876
Flexible tube set	1 hose connection, 1 hose connector, PTFE hose 4 x 1 length 5 m	554 883
<b>Retrofit sets</b>		
Level switch cplg.	Ultrasonic level switch with M12 fixed connector	561 533
Locking screw M12 x 1 cplg.	Locking screw PVDF with O-ring FKM	554 887

**Please use the attached application questionnaire to describe your process and send it to your Bürkert office to check the suitability. Please complete all three pages.**
